

# Learning Boxes

Our learning boxes are available to hire on a per term basis. The content is exceptional and sets new standards for learning boxes. They are an ideal and unique way to introduce programming back into the curriculum.

The main item in the box is an original and working BBC Microcomputer from 1981. It has been **specially modified** to eliminate the need for tapes and floppy disks and comes with lots of installed games and programs that can be loaded practically instantly. We have also modified the machine to have a standard composite video output that can be connected to any LCD TV or digital projector that has the yellow round AV socket on the side or back.

The BBC Micro User Guide is well known for its readability, clarity and simplicity. It is by far and away the best introduction to BASIC programming and is supplied in this learning box.

Explore how microprocessors have become more and more powerful. We have included actual components and a chart showing the progression from 1943 to 2006.

We have also sourced 4 original computer magazines from the 80's. These contain a wealth of information about early computers and really set the scene. The imagery and prices really make students think about how things have changed!

### Contents :

- BBC Micro Computer + Video Cable
- BBC Micro User Guide
- 4 Original Computer Magazines
- Computer Games
- 8", 5.25" and 3.5" Floppy Disks
- Punch Cards
- A Length of Paper Tape
- 40 Pin Microprocessor Chip
- A Few Transistors
- A Thermionic Valve
- Transistors/Processor Chart
- Item Information Sheets
